ARYAN PATHANIA

Data Analyst | Data Science & Business Intelligence

Chandigarh, India | pathaniaaryan169@gmail.com | +91 9317418192 | LinkedIn | GitHub

SUMMARY

Final-year B.Tech student in Artificial Intelligence & Data Science (CGC University, Mohali) with hands-on experience across the full data-to-decision pipeline — SQL/Python-based data cleaning, exploratory analysis, statistical modeling, and BI dashboarding on datasets up to 50,000+ records. Comfortable translating raw, messy data into forecasts, segment insights, and stakeholder-ready visualizations. Seeking a full-time Data Analyst or Data Scientist role.

CORE SKILLS

Languages & Tools: Python, SQL, MySQL, Microsoft Excel, Pandas, NumPy, Git/GitHub, Jupyter Notebook

Data Analysis & Statistics: Exploratory Data Analysis, Data Cleaning, Statistics & Probability, Feature Engineering, Time-Series Forecasting, Hypothesis-driven Analysis

Machine Learning: Scikit-learn, XGBoost, Regression & Classification, Model Evaluation (Precision/Recall/F1/ROC-AUC)

BI & Visualization: Tableau, Power BI (in progress), Matplotlib, Seaborn, Dashboard Design for Non-Technical Stakeholders

Foundations: DBMS, Data Structures & Algorithms, Object-Oriented Programming

PROJECTS

Sales Forecasting & Business Intelligence Dashboard — *Python, SQL, Tableau*

- Designed a forecasting system over 3 years / 50,000+ transactions of historical sales data to predict revenue trends and support planning decisions.
- Cut data inconsistencies by 40% during cleaning; achieved mean absolute error within 5% of actual revenue with time-series and regression models.
- Built Tableau dashboards surfacing KPIs, monthly growth trends, and region-wise performance for decision-makers.

Customer Churn Prediction System — *Python, Scikit-learn, XGBoost, SQL*

- Built an end-to-end analysis pipeline to identify churn drivers on a 7,000+ record telecom/banking dataset.
- Cut dataset noise by ~30% through cleaning and feature engineering; benchmarked Logistic Regression, Random Forest, and XGBoost.
- Reached 89% accuracy and 0.91 ROC-AUC with the best model, evaluated via precision, recall, F1, and confusion matrices.

House Price Prediction & Market Analysis Platform — *Python, Scikit-learn, Tableau*

- Analyzed 10,000+ property records to model residential price drivers by location, area, and amenities.
- Improved RMSE by 18% over a baseline linear model via feature scaling and log-transformation; benchmarked Linear Regression, Decision Tree, and Gradient Boosting.
- Delivered interactive Tableau dashboards of price trends and regional comparisons for non-technical stakeholders.

Exploratory Data Analysis (EDA) Portfolio — *Python, Pandas, Matplotlib, Seaborn*

- Conducted end-to-end EDA on a real-world public dataset — cleaning, missing-value treatment, outlier detection, and statistical summarization.
- Uncovered non-obvious patterns via correlation heatmaps and trend analyses; published a fully reproducible, documented analysis on GitHub.

EDUCATION

B.Tech, Artificial Intelligence & Data Science — CGC University, Mohali

2024 – 2027 (Final Year) | 71% aggregate | Relevant coursework: ML, Statistics, DBMS, DSA

Senior Secondary (Class XII), CBSE — Hamirpur Public School, Himachal Pradesh (2023)

Secondary (Class X), CBSE — Hamirpur Public School, Himachal Pradesh (2021)

CERTIFICATIONS

Deep Learning Specialization — Coursera / DeepLearning.AI (Andrew Ng) | AWS Academy Generative AI Foundations | End-to-End AI Project Development & Deployment Bootcamp

ACHIEVEMENTS & ACTIVITIES

- Led a team through the Smart India Hackathon (SIH) internal round; project shortlisted at college level out of 30+ competing teams.
- Participated in multiple hackathons focused on data-driven problem statements, delivering working prototypes under time pressure.
- Attended workshops on Machine Learning and Data Analytics, applying learnings directly to academic projects.
